## HDBI FEATURES

- A) Backward inclined blades are fabricated of heavy-gauge, high-strength steel to assure long lasting, efficient operation.
- B) Turned, ground and polished shafting assures smooth operation. A rust preventive coating is applied prior to shipment.
- C) Heavy-duty, self-aligning, relubricatable, ball bearings in cast-iron pillow blocks. Bearings are selected for optimal performance depending on fan size and class.
- D) Bearing base is heavy steel construction with internal supports to maximize rigidity and assure long equipment life. Arrangement #1 fans can be converted to arrangement #9 with the addition of the motor slide base.
- E) Inlet side support is used to assure a vibration-free, stable housing.
- F) Slip collar inlet (not shown) is used for duct work connection. Flanged inlet optional.
- G) Inlet bell is designed for smooth air entrance into the wheel inlet for maximum efficiency.
- H) Reversible housing provides increased configuration flexibility. Removable side plates allow the wheel to be removed from the motor or inlet side of the housing. Housings are rotatable in 45 degree increments. Wheels are not reversible. See note at right.

**NOTE: HDBI-330 and HDBI-360 housings are not rotatable or reversible.**

## ADVANTAGES OF DIRECT DRIVE ARRANGEMENT #4 & #4HM

All sizes available with 2 wheel diameters in 100% to 50% widths in 5% increments

Shown with optional inlet and discharge flanges.

### ADVANTAGES

- Compact - requires less space.
- Weighs Less - requires less supporting structure.
- Less Maintenance - no belts or fan bearings to replace.
- Less Expensive - above features result in lower first cost and lower maintenance cost.
- More Ratings - the combination of several motor speeds, two wheel diameters and eleven fan widths results in a vast selection of direct drive ratings.
- Temperature - good up to 200°F. (93°C.)

Shown with optional inlet and discharge flanges.

### OPTIONAL ARRANGEMENT 4HM HORIZONTAL MOUNTING

## ⚠ WARNING

The use of aluminum or aluminum alloys in the presence of steel which has been allowed to rust requires special consideration. Research by the U.S. Bureau of Mines and others has shown that aluminum impellers rubbing on rusty steel may cause high intensity sparking.

The use of the above Standard in no way implies a guarantee of safety for any level of spark resistance. Spark-resistant construction also does not protect against ignition of explosive gases caused by catastrophic failure or from any airstream material that may be present in a system.

Fan performance tables are developed using standard air which is 70°F., 29.92" barometric pressure and .075 lbs. per cubic foot. Density changes resulting from temperature or barometric pressure variations (such as higher altitudes) must be corrected to standard conditions before selecting a fan based on standard performance data. Temperature and/or altitude conversion factors are used in making corrections to standard conditions.

### EXAMPLE:

Select a belt driven HDBI-300 to deliver 8327 CFM at .50" SP at 200°F. (93°C.), and 7000' altitude.  
**STEP 1.** From the table, conversion factor is 1.63.  
**STEP 2.** Correct static pressure is: 1.63 x .50" SP = .81" SP at standard conditions.  
**STEP 3.** Check HDBI catalog for 8327 CFM at .81" SP. We select a belt driven HDBI-300 and interpolation gives 660 RPM and 1.83 BHP.  
**STEP 4.** Correct the BHP for the lighter air: 1.83 ÷ 1.63 = 1.12 BHP. A 1.5 HP motor will suffice at 200°F., and 7000' but not at standard conditions. Special motor insulation may be required due to altitude.

Cincinnati Fan & Ventilator Company certifies that the HDBI Heavy Duty Backward Inclined Fans shown on this page and on pages 12 through 23 are licensed to bear the AMCA seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

Fans are capable of operating to the maximum safe speeds shown on each performance table. These speeds permit obtaining the minimum SP/OV limits established as follows:

- CLASS II - 8.5" SP at 3000 FPM to 4.25" SP at 4175 FPM.
- CLASS III - 13.5" SP at 3780 FPM to 6.75" SP at 5260 FPM.
- CLASS IV - 20" SP at 4600 FPM to 10" SP at 6400 FPM.

## for partial width fans with two wheel types

The partial width fan ratings shown on this page and on Pages 9,10 and 11 were derived from tests performed in accordance with AMCA Publication 211 and fan laws were applied to arrive at the data shown for partial width fans.

However, none of the partial width fans or fans with SQBI wheels are licensed to bear the AMCA seal.

All 100% width fans with HDBI wheels are licensed to bear the AMCA seal as shown on pages 7 and 12 through 23.
